

For Immediate Release 2021

The Sugarcane Industry Sweet for Safety

Sugarcane Industry Guide to Safety 2020/21

Industry Partner

Pro-Visual Publishing and their partnering industry associations have released the annual Augmented Reality (AR) Educational Safety Guide for sugarcane farmers, a free wall poster designed to display year-round to use with your phone, or other smart device, to view augmented content alongside the printed safety topic content.

The AR itool enhances engagement and learning of key safety issues that should always be top of mind when performing daily tasks. With the agriculture industry facing one of the highest rates of injury and fatality annually, remaining vigilant and on top of safety procedures is crucial to help ensure sugarcane workers arrive home safe every day.

Topics this year include:

- Smartcane BMP – a world-class best practice system for growing in QLD.
- Quad bike safety and regulations under WHS laws.
- Sun safety and personal protection for those working outside a majority of the time.
- PCBUs and their obligations regarding electrical safety.
- Record keeping requirements.

The wall guide becomes a useful go-to piece for solo reference or training talks and by downloading the free Pro-Vis AR app, users can scan AR icons on the guide for additional resources such as videos, web-links and PDF files that 'pop-up' in an augmented setting, providing a stimulating environment in which to learn.
